

# RSupply

RELATIONAL SUPPLY

## SUSTAINING THE NAVY'S OPERATING FORCES

Providing supplies and supply support to the fleet to ensure a high state of fleet readiness demands timely, accurate, and relevant information. RSupply is one of the Naval Tactical Command Support System (NTCSS) software applications built to provide this information.

RSupply supports logistics for the Operating Forces of the Navy, Marine Corps, and many supporting shore installations.

### KEY FEATURES

RSupply provides the U.S. Navy with on-line inventory, logistics, and financial management tools. Some key features:

- Provide on-line, real-time interactive capability for automated supply and financial management functions for both surface and aviation sites.
- Assist shipboard personnel in the posting of stock records, obligation and expenditure of funds, inventory management and OPTAR accounting, and other supply functions.
- Provide the interfaces required to communicate RSupply information throughout the ship and to other activities, afloat or ashore.

### PRIMARY COMPONENTS

RSupply provides Navy personnel with quick, convenient access to the functions they perform most often: ordering, receiving, and issuing necessary supplies and material; maintaining financial records; and reconciling supply,

inventory, and financial records with the shore infrastructure. The following are essential components of Relational Supply:

#### Site

Controls the information used throughout RSupply related to

organization, serial numbers, user access, validation tables, fund codes, default values and maintenance information.

#### Inventory

Establishes and updates material files; processes inventories, reorders, and offloads; and manages demand processing, excess cancellation requests,

SEAMART and PEB item reviews, and pickup.

#### Logistics

Orders stock and DTO material; receives and issues stock; queries system files; tracks DLR carcasses; maintains control and validation files; manages suspense processing, requisitions file monitoring, conducts history processing, and various logistics reports related to requisition files.

#### Financial

Records OPTAR allocations, processes financial adjustments, updates appropriation data, and produces OPTAR and other financial reports.

Other RSupply features include:

- One-step field level and window level help
- Standard and ad hoc printed reports without exiting current function
- System administration including user access and role maintenance
